

RACE ENGINE AIR CLEANER HOUSING

ABSTRACT OF THE DISCLOSURE

An air cleaner housing for holding a cylindrical filter element and providing a laminar flow of air to a carburetor of an engine. The housing has a bottom plate with an outer peripheral portion and a venturi section radially inward of the outer peripheral portion. A top cover of the housing has a convex section radially inward of a top peripheral portion. The convex section of the top cover is at least partially positioned over the bottom venturi section of the bottom plate.
